                                                                                                                                                                                                                                                                                                                                                                                          AAY06220), a novel translocated intimin receptor from an enteropathogenic Escherichia coli (EPEC) strain. The 78 kDa EPEC protein is secreted by the bacterial pathogen. Diagnosis of disease caused by pathogenic E. coli can be performed by use of antibodies that bind to Tir to detect the protein, or the use of nucleic acid probes for detection of nucleic acids encoding Tir. A kit for the detection of Tir-producing E. coli is provided. Also provided are a method of immunising a host with Tir to induce a protective immune response, and a method for screening for compounds which interfere with the binding of bacterial pathogens to their receptors

The sequence was deduced from an isolated tir (EPEC) strain. The sequence was deduced from an isolated tir polymucleotide (see AAX5885). Tir proteins are secreted by attaching and effacing pathogens such as EPEC and EHEC (see AAX6821) E. coli. The bacterial pathogens insert their own receptors into mammalian cell surfaces, to which the pathogen then adheres to trigger additional host signaling events and actin nucleation. Diagnosis of disease caused by pathogenic E. coli can be performed by use of antibodies that bind to Tir to detect the protein or the use of nucleic acid probes for detection of nucleic acids encoding Tir polypeptide. Isolated Tir nucleic acids, Tir peptides, a recombinant method for producing recombinant Tir, antibodies which bind to Tir, and a kit for the detection of Tir-producing E. coli are provided. A method of immunising a host with Tir to induce a proteins can be used in attenuated E. coli to induce a cell-mediated

A polynucleotide of the invention has anti-bacterial civity. The polypepide can be used in detection and/or treatment of 0157:H7 infection. The nucleotide sequence of the genome of Enterohaemorragic E coli 0157:H7 was determined. The present sequence represents an E. coli 0157:H7-specific polypeptide of the

CC each of the computed five attributes, and identifying the adhesin and CC adhesin-like proteins having probability of being an adhesin (Pad) as CC equal or greater than 0.51. Also claimed is a set of 274 annotated genes cC encoding adhesin and adhesin-like proteins, having 274 fully defined 162-CC 11151 base pair (SEQ ID NO: 385-658) sequences; a set of 105 hypothetical CC genes encoding adhesin and adhesin-like proteins, having 174 fully defined 162-CC 11151 base pairs (SEQ ID NO: 385-658) sequences; a set of 105 hypothetical CC genes encoding adhesin-like proteins, having 274 fully defined 53-3716 base CC pair (SEQ ID NO: 1-279); a set of 105 hypothetical adhesin and adhesin-like proteins, having 105 fully defined 53-3716 base CC pair (SEQ ID NO: 1-279); a set of 105 hypothetical adhesin and adhesin-like proteins, having 105 fully defined 106-5291 base pair (SEQ ID NO: 1-279); a set of 105 hypothetical adhesin and adhesin-like CC patroteins, having 105 fully defined 106-5291 base pair (SEQ ID NO: 1-279); a set of 105 hypothetical adhesin-like CC proteins, of therapeutic potential, and identifying adhesin-like CC proteins, of therapeutic potential, and identifying and short-listing CC useful for identifying putative adhesins that are important in drug CC discovery and preventing therapeutics for whooping cough, pneumonia, CC distantly related organisms, and from bacteria belonging to a wide CC distantly related organisms, and from bacteria belonging to a wide conjugue proteins. The present sequence is a microbial pathogen adhesin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          identifying adhesin and adhesin-like proteins, by computing the sequence-based attributes of protein sequences using five attribute modules of a neural network software, training an artificial neural network (ANN) for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Computational method for identifying adhesin and adhesin like molecules, comprises computing sequence-based attributes of protein sequences using neural network software and training an artificial neural network.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         corresponding polynuclectides. The EspFU polypeptides are EspF-like
polypeptides encoded by genes of the cryptic prophage CP-933U of
enterohemorrhagic Escherichia coli (EHEC) or enteropathogenic Escherichia
Coli (EPEC) that binds to a neuronal wiskott-aldrich syndrome protein (N-
WASP) polypeptide or restores the actin pedestal formation activity of
enteropathogenic E. coli (EPEC) strain KC12. The invention further
crelates to a method of identifying a candidate compounds capable of
binding to and/or modulating the activity of EspFU and EspFU-interacting
to and/or modulating the activity of EspFU and EspFU-interacting
crinibits protein-protein interactions between EspFU and EspFU-interacting
proteins such as N-WASP, transducer of Cdc42-dependent actin assembly-1
(Toca-1) and p21-activated kinase 1 (Pakl). EspFU polynucleotides are
useful for treating EHEC infection. The present sequence is the
enterohemorrhagic Escherichia coli translocated intimin receptor (Tir)
protein. This sequence is critical for the formation of actin pedestals
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            signaling events and actin nucleation. Diagnosis of disease caused by pathogenic E. coli can be performed by use of antibodies that bind to Tir to detect the protein or the use of nucleic acid probes for detection of nucleic acids encoding Tir polypeptide. Isolated Tir nucleic acids, Tir peptides, a recombinant method for producing recombinant Tir, antibodies which bind to Tir, and a kit for the detection of Tir-producing E. coli are provided. A method of immunising a host with Tir to induce a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence represents Tir, a novel translocated intimin receptor (formerly termed Hp90) from an enterohaemorrhagic Escherichia coli (EHEC) strain. The sequence was deduced from an isolated tir polymucleotide (see AAX58859). Tir proteins are secreted by attaching a effacing pathogens such as EHEC and EPEC (see AAY06220) E. coli. The bacterial pathogens insert their own receptors into mammalian cell surfaces, to which the pathogen then adheres to trigger additional host surfaces, to which the pathogen then adheres to trigger additional host
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                protective immune response is also provided. In addition, Tir fusion proteins can be used in attenuated E. coli to induce a cell-mediated immune response to other polypeptides, e.g. antigens. A method for screening for compounds which interfere with the binding of bacterial

                                                                                                                                                                                                                                                                                                                                                                                                                                                transcription factor; stress tolerance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Stress tolerant plant-related transcription factor protein SeqID116.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                28-JUL-2005
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AEA26275 standard;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

The invention relates to 2175 novel human ovarian antigens (ABP41054-ABP43228) and to cDNAs encoding them (ABQ54131-ABQ56305), and also encompasses polypeptides 90% identical and polymucleotides 95% identical to the sequences of the invention. The invention additionally relates to recombinant vectors and host cells comprising human ovarian antigen polymucleotides, antibodies against human ovarian antigens, and the use of ovarian antigen polymucleotides and polypeptides in diagnosing, treating, prognosing or preventing various ovary and/or breast-related disorders. Such conditions include ovarian cancer and breast cancer, and metastacic tumours of ovarian or breast origin, reproductive system disorders (e.g., infertility, disorders of pregnancy, anovulation, polycystic ovary syndrome, ovarian cysts, and dysmenorrhoea), endocrine disorders, infections (e.g., chlamydia, HIV, toxoplasmosis, and toxic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   and urinary system disorders. Ovarian antigen polypeptides and polynucleotides may also be used in screening for compounds which modulate ovarian antigen expression or activity. The polynucleotides may further be used for gene therapy, chromosome mapping, in the identification of individuals and in forensic analysis, and the polypeptides may be used as food additives or to prepare antibodies useful in disease diagnosis, drug targeting and phenotyping. The present sequence represents a human ovarian antigen of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          shock syndrome), inflammatory conditions (e.g., mastitis, oophoritis and vaginitis), immune disorders (e.g., congenited and acquired immunedeficiencies, autoimmune oophoritis, systemic lupus erythematosus), blood-related disorders (e.g., anaemia), cardiovascular disorders, blood-related disorders, neurological disorders, gastrointestinal disorders

                                                                                                                                                                              Ś
                                                                                                                                                                                                                                                                                       BXXXE
                                                                                                                                                   밁
                                                                                                                                                                                                                                                                                                              CC active or immunogenic fragment or a sequence comprising 90 % identity to CC ECMCAD 1-36. The molecule is useful for screening a compound for CC ECMCAD 1-36. The molecule is useful for screening a compound for CC effectiveness as agonist or antagonist of itself. The protein and its CC encoding nucleic acid are useful in the diagnosis, treatment and CC prevention of genetic disorder such as adrenoleukodystrophy, Down's CC syndrome, cystic fibrosis, Gaucher's disease, myotonic dystrophy, sickle cell anemia, thalassemia, Wilms' tumor, etc, immunological disorders such as acquired immunodeficiency syndrome (AIDS), adult respiratory distress syndrome, allergies, anemia, asthma, atherosclerosis, autoimmune CC grave's disease, multiple sclerosis, Goodpasture's syndrome, gout, context dermatitis, Goodpasture's syndrome, gout, veitis, etc, a neurological disorder such as epilepsy, stroke, CC Alzheimer's disease, Huntington's disease, Parkinson's disease, multiple sclerosis, bacterial and viral meningitis, periodic paralysis, mental CC disorders including mood, anxiety, and schizophrenic disorders, amnesia, CC condrossarcoma, giant cell tumor, psoriatic arthritis, infectious csteoporosis, systemic sclerosis, etc., and a cell proliferative disorder such as actinic keracosis, atherosclerosis, hepartitis, psoriasis, cancers including adenocarcinoma, leukemia, lymphoma, melanoma, myeloma, etc.

This sequence represents one of the novel proteins.
                                                                                                                                                                                                                                    Query Match

                                                                                                                                                                          immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous hazheiner's, Parkinson's disease, Huntington's disease, such as Alzheiner's, Parkinson's disease, Huntington's disease, such as Alzheiner's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activitys such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and c.N.S disorders. Note: The sequence data for this patent did not form part of the printed specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Tang
Wang
                                                                                                                                      Sequence 1086
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to human nucleic acids (AAI57798-AAI61369) and encoded polypeptides (AAM38642-AAM42213) with nootropic,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      23-DEC-1999; 99US-00471275.

                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to a polynucleotide for preventing, treating or diagnosing a disease in an individual. The composition or the polypeptide, polynucleotide or RNA precursor, or antibody is useful for diagnosing, preventing or treating diseases (e.g. cell proliferative diseases such as cancer) in an individual. These may also be used for identifying substances capable of binding to or modulating the function of the polypeptide, capable of affecting the function of the corresponding gene, or capable of inhibiting the cell division cycle or cell cycle progression, preferably mitosis and/or meiosis. The present sequence represents an antagonist of cell cycle progression protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New cell cycle progression genes and proteins for modulating cell cycle progression in cells, for preventing, treating or diagnosing cell proliferative diseases (e.g. cancer) or for identifying modulators of

CC whether a mammal will respond or is responding to an anti-cancer agent to that modulates cyclin-dependent kinase (cdk) activity. The method CC comprises measuring the level of one or more biomarkers selected from CC 2774 biomarkers given in the specification (nucleotide sequence SEQ ID CC NO:1246 (Genbank EST W28729) is especially preferred). The method of the CC invention is utilized in a kit for determining or predicting whether CC microarray comprising the invention also describes a method for CC utilizing individualized genetic profiles for treatment by an agent CC utilizing individualized genetic profiles for treating diseases and CC disorders based on patient's response and molecular level, specialized CC against the biomarkers and a cell culture model to identify biomarkers. CC The cdk modulator is preferably N-5-[[5-(1,1-Dimethylethyl)-2-CC oxazolyl]methyl]thio]-2-thiazolyl-4-piperidine carboxamide, 0.5-L-CC tartaric acid salt. Note: The sequence data for this patent did not form CC cart of the printed specification, but was obtained in electronic format CC directly from WIPO at ftp.wipo.int/pub/published_pct_sequences. This CC sequence represents a biomarker used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Biomarkers useful for predicting to a cancer treatment comprising dependent kinase activity.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CC cells in which both alleles of a gene are modified, comprising modifying CC one allele by insertion or replacement by a cassette having an CC expressible selectable marker and modifying other allele by ccombination, of a promoter replacement fragment with a heterologous promoter, so that expression of the second allele is regulated by the CC promoter. (M1) is useful for constructing a strain of diploid fungal CC cells in which both alleles of a gene are modified. The diploid fungal CC cells having both alleles modified are useful for identifying a gene that CC is essential to the survival or growth of a fungus, a gene that CC is essential to the resistance of a diploid fungus to an antifungal CC agent, an antifungal agent that inhibits the growth of a diploid fungus CC and for identifying a therapeutic agent for treatment of a mammalian CC disease. (M1) is useful for identifying a compound which modulates the CC activity of a gene product, preferably enzymatic activity, carbon CC compound catabolism, biosynthetic, transporter, transcriptional, CC translational, signal transduction, DNA replication and cell division CC ability. The method is useful for identifying a compound having the cativity to inhibit growth or proliferation of C. albicans cells and for CC essential Candida albicans protein used in the method of the invention. CC specification but is based on sequence information supplied to Derwent by CC albicans.
                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

                        Diagnosing recurrent pregnancy loss comprises examining formin-2 a mutation and measuring biological activity and expression of fidentified to play a role in occyte development.
                                                                                                                                  N-PSDB; AAD62829.
                                                                                                                                                                                                                                                                    (LEDE/)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a novel method for determining whether a patient has an increased risk for recurrent pregnancy loss, involving determining whether the formin-2 (Fun-2) gene of the patient has a mutation. The method of the invention is useful for determining whether a patient has a increased risk for recurrent pregnancy loss (RPL/recurrent spontaneous abortion/miscarriage). The sequence represents the murine formin-2 protein of the invention

                                                    The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL1616-ABL30511), expressed DNA sequences (ABL01610-ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a method of diagnosing recurrent pregnancy loss (RPL). The method involves examining formin (Fmn)-2 gene for a mutation and measuring biological activity and expression of Fmn-2, in which decreased levels indicates an increased risk for RPL; or examining the person's formin-2 gene for polymorphisms, in which the presence of a polymorphism indicates an altered risk for RPL. The method is used for diagnosing and treating RPL e.g. in humans. The present sequence is mouse

                                          containing functional domains containing functional domain. The new method sequence to, the original target function to be identified. enables proteins having a common function to be identified. Identification of novel SH3 proteins will be useful for a better understanding of cell growth, malignancy, signal transduction processes, etc. New candidate drugs can be identified, and their specificities (e.g. etc. New candidate drugs can be assessed using the method of the
                                                                                                                                                   recognition units. These sequences were used as parts of multivalent recognition unit complexes used in the method of the invention. The method of the invention is for identifying polypeptides containing functional domains of interest (especially SH3 domains). It comprises contacting a multivalent recognition unit (RU) complex with a number of peptides and identifying polypeptides having a selective binding affinity for the RU complex. The method is based on functional similarities and does not rely on sequence similarities. Prior methods only gave limited success for identifying proteins containing an SH3 domain due to the minimal sequence homology among known SH3 proteins. Multivalent RU complexes are particularly suited to screening for polypeptides containing functional domains that are similar to, but not identical in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (CYTO-)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Src-homology region 3 domain; human; mouse; SH3 domain; cell growth; cellular signalling element; cellular structural element; malignancy; protein identification; functional domain; protein screening; cellular signal transduction process; binding peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                             Identifying polypeptide(s) having specific functional domain (esp.
domain) - comprises detecting selective binding to recognition uni
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          03-APR-1996;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match
                                                                                                          herpesvirus isolate, for example Equine herpesvirus type 1 (EHV-1) or type 4 (EHV-4), which comprises using a genetic marker, especially an ORF30-ml region marker. The invention may be useful for the production of compounds with a virucide activity or for the development of a vaccine. The method, kit and sequence of the EHV-1 strain V592 polymerase ORF30-ml region are useful for assessing the virulence of a herpesvirus or neurovirulence. The vaccine is useful for immunising a host against a herpesvirus disease and for treating disease. The present sequence is that of a peptide which is related to the invention.

                                                                                                                                                                                                                                                                                                 Eucalyptus grandis or Pinus radiata. The present sequence is one such transcription factor. The transcription factor may be used to produce a plant having modified gene expression such as a woody plant e.g. a eucalyptus, pine, acacia, poplar, sweetgum, teak, or mahogany species or to modify the activity of a polypeptide in a plant. The transcription factors of the present invention are members from the following families of regulatory proteins: bZIP, bZIP family of G-box binding factors, basic helix-loop-helix zipper, homeotic/homeodomain/homeobox/MADS, homeodomain aripper, LIM domain, AP2 and EREBS, zinc finger domains of type 2
                                                                                                                                                                                                                                                                                                                                                                                                                                    The

                                                                                                                                                                                                                                                                                                                                                                                    The invention provides the primary nucleotide sequence of the WSBV genome (AAH62889), predicted transcript sequences (AAH62889) and encoded proteins (AAG84910-AAG85051) and oligonucleotide sequences (AAH62840-63160) suitable for use as primers or probes. The nucleic acid molecules and proteins of the invention are useful for diagnosis and monitoring viral infection, in screens for antiviral agents and for monitoring viral gene expression or activity during a treatment regimen. The nucleic acid molecules are also useful as antisense constructs to control viral gene expression in infected cells and tissues and to create
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Primary nucleotide sequence of the shrimp white spot Bacilliform virus (WSBV), useful for producing viral polypeptides that can be used to screen for agents that are useful for treating WSBV infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Shrimp white spot Bacilliform virus; antiviral agent; gene expression; ant transgenic viral resistant shrimp.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to the genomic sequence of Pyrococcus abyssi (see AAF86431 and AAH41223-7) and P. abyssi proteins. P. abyssi a hyperthermophilic archaeon, which is isolated from deep-sea hydrothermal vents. The present sequence is one such P. abyssi protein. The proteins of the present invention have various potential industrial uses, since the proteins are stable at very high temperatures, some up to 110 degrees centigrade. Note: This patent is in the same patent family w0200065062, which contains additional sequences as shown in AAB99132-AAB99143, AAH75903-AAH75920 and AAG66436
                                                                                                                                                                                                                                                                                                                                                                                      Bacteria.
    Cao Y,

The invention relates to a recombinant DNA construct comprising a CC promoter functional in a plant cell, where the promoter is positioned to CC provide for expression of a polynucleotide encoding a polypeptide from a CC microbial source. The invention also relates to a transformed plant CC comprising the recombinant DNA construct and a method of producing a CC transformed plant by a crop plant and construct and a method of producing a crop plant CC such as maize or soybean. The method of producing a transformed plant CC such as maize or soybean. The method of producing a transformed plant cCC inventor of the construct and growing the transformed plant with the CC recombinant DNA construct and growing the transformed plant with the CC improved plant properties. CC improved plant properties, e.g. improved cold, heat or drought tolerance, CC improved plant properties, e.g. improved cold, heat or drought tolerance, CC improved plant properties, e.g. improved cold, heat or drought tolerance, CC increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased rate of CC content, improved yield by modification of carbohydrate, nitrogen or CC phosphorus use and/or uptake, by modification of photosynthesis or by condition, improved plant growth and development under at least one stress condition, improved lignin production or improved galactomanan CC condition, improved lignin production or improved galactomanan CC condition. Note: The sequence data for this patent did not CC form part of the printed specification but was obtained in electronic CC format from USPTO at sequence data for this patent did not compared the printed specification but was obtained in electronic CC format from USPTO at sequence data for this patent did not compared the printed specification but was obtained in electronic CC format from USPTO at sequence data for this patent did not format from USPTO at sequence data for this patent did not format from the printed specifi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          for expression of a polynucleotide encoding a polypeptide from a microbial source, useful for producing plants with improved properties.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WPI;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention describes a new isolated nucleic acid encoding a Klebsiella pneumoniae polypeptide. Also described are: a recombinant expression vector comprising the nucleic acid, operably linked to a transcription regulatory element; and a cell comprising the recombinant expression vector. The nucleic acid is useful for preparing a vaccine composition against Klebsiella pneumoniae. This is the amino acid sequence of a
                                    DNA in order to regulate gene transcription and gene expression in a plants, in particular Eucalyptus grandis and Pinus radiata. The press invention describes DNA constructs containing DNA encoding a transcription factor that regulates the promoter, which is operably
                                                                                                                                                                                                                This invention relates to novel isolated plant nucleic acid molecules, variants thereof, that encode transcription factors. Specifically, it refers to transcription factor proteins that are capable of binding to
                                                                                                                                                                                                                                                                                                                                                                                                    Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              06-JUN-2003; 2003US-0476189P
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               07-JUN-2004; 2004WO-US017965

                                                                                                                 transgenic plants expressing a transcription factor that confers a trait to the plant such as increased drought, salt or disease tolerance, height change, enhanced cold/ frost tolerance, enhanced color, health and nutritional characteristics, as well as improved taste, starch composition, flower longevity and germination, amongst others. Accordingly, such plants that are successfully transfected with a DNA construct can be characterized by a difference in flower color, petal or leaf shape and size, aroma or plant height. This polypeptide is a plant transcription factor protein sequence of the invention.

polynucleotide having any of 5544 nucleotide sequences (CDNAs SEQ ID NO: 1-5544) and encoding a polypeptide with any of 5544 amino acid sequences (SEQ ID NO: 5545-11088). The cDNAs and proteins are from corn, soybean, Arabidopsis, wheat and rape but the specification does not indicate which sequences is derived from which organism. Also included is a method of producing a plant having an improved property, comprising transforming a plant with a recombinant DNA construct comprising a promoter region functional in a plant cell operably joined to a polynucleotide encoding a polypeptide associated with the property, and growing the transformed plant. The property is selected from improving plant cold tolerance, for manipulating growth rate in plant cells by modification of the cell cycle pathway for improving plant cold received and polypeptide associated with the property. The invention relates a recombinant DNA construct comprising improving plant drought tolerance, for providing D increased

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention provides a method for high throughput screening of an agent for modulating the activity of a component involved in actin polymerization. The method involves combining pyrene-globular actin (pyrene-G-actin) or acrylodan-globular actin (acrylodan-G-actin), Arp2/complex, nucleation promoting factors (NPFs) and an upstream regulator the presence of an agent and detecting the fluorescence which is a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ADT60207
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          the purification of the Arp2/3 complex that can be used in polymerization
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Local

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC tolerance to pathogens or pests, for yield improvement by modification of carbohydrate, nitrogen or pied and/or content, for yield improvement by modification of carbohydrate, nitrogen or phosphorus use and/or uptake conditivation of carbohydrate, nitrogen or phosphorus use and/or uptake condition. The polynucleotide may condend the present invention are useful in the field of biochemistry and compositions of the present invention are useful in the field of biochemistry and compositions of condition. The polynucleotide may condition, in particular for producing transgenic plants with improved biological characteristics such as increased yield, improved nitrogen condition, increasing plant tolerance to cold or heat, improving plant colerance to plant pests or pathogens. They can also be used in physical arrays of molecules, plant breeding markers, computer-based storage and conditions systems. The present sequence is one of the 5544 plant protein continuous systems of the invention. Note: The sequence data for this patent did cont form part of the printed specification, but was obtained in celectronic format directly from USPTO at conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          producing a plant having an improved property, comprising transforming a plant with a recombinant DNA construct comprising a promoter region functional in a plant cell operably joined to a polynucleotide encoding a polypeptide associated with the property, and growing the transformed plant. The property is selected from improving plant cold tolerance, for manipulating growth rate in plant cells by modification of the cell cycle pathway, for improving plant drought tolerance, for providing increased resistance to plant disease, for galactomannan production, for production of plant growth regulators, for improving plant tolerance, for improving plant tolerance to herbicides, for increasing the rate of homologous recombination in plants, for lignin production, for improving plant tolerance to extreme osmotic conditions, for improving plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates a recombinant DNA construct comprising a polynucleotide having any of 5544 nucleotide sequences (CDNAs SEQ ID NO: 1-5544) and encoding a polypeptide with any of 5544 amino acid sequences (SEQ ID NO: 5545-11088). The CDNAs and proteins are from corn, soybean, Arabidopsis, wheat and rape but the specification does not indicate which

Pseudomonas aeruginosa polypeptide #9873.

Bacterial infection; Pseudomonas aeruginosa infection; antibacterial

Pseudomonas aeruginosa

RESULT 32

ABO77698 standard; protein; 631 AA

```
the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

((1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense concleic acid; (4) a host cell containing the vector; (3) an isolated containing the vector; (3) an isolated containing the polypeptide by the inding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation; (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway crequired for proliferation, or that inhibits cellular proliferation or the biological pathway in which a proliferation, or that inhibits cellular proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent constitute activity activity of a culture of activity of a culture or collucation of an organism; or (13) identifying the target of a compound that inhibits the collular proliferation of an organism; or (13) identifying the target of a compound that inhibits the collular proliferation of an organism. The antisense nucleic acids are useful for identifying proliferation to isolate candidate molecules for rational confidence of the strains or screening for homologous nucleic acids required for cellular proliferation for arrange or for arrange and antisense nucleic acids are sectored to incompound that inhibits the confidence and inference or for arrange and antisense nucleic acids are useful for collular proliferation to isolate candidate molecules for rational confidence and incompound that inhibits and antisense nucleic acids are confidented.

                                                                                                                                                                                                                                                       drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               08-FEB-2002; 2002US-00072851

                                                                                                                                                                                                                                                                                                                                                                                                           á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to Pseudomonas aeruginosa polypeptides and the polynucleotides encoding them. The sequences are useful in diagnosis and the therapy of pathological conditions, as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from a compound, such as a polypeptide, for the ability to bind a P. aeruginosa nucleic acid, as components of concluding anti-P. aeruginosa drugs, as targets for antibacterial drugs, concluding anti-P. aeruginosa drugs, as templates for recombinant conduction of P. aeruginosa drugs, as templates for recombinant conduction of P. aeruginosa drugs, as templates or polypeptides, as target components for diagnosis and/or treatment of P. aeruginosa-caused components for diagnosis and/or treatment of P. aeruginosa-caused components for diagnosis and/or treatment of P. aeruginosa-caused confection, and in detection of P. aeruginosa sequences or other sequences of Pseudomonas species using biochip technology. Sequences ABO67826-CC ABO84396 represent P. aeruginosa polypeptides of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from USPTO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to novel abiotic stress responsive polynucleotides and polypeptides. Also disclosed are vectors, expression cassettes, host cells, and plants containing such polynucleotides. Also disclosed are methods for using the polynucleotides and polypeptides to alter the responsiveness of a plant to abiotic stress. The invention is useful in agriculture. The nucleic acid is useful for determining whether a test plant has been exposed to an abiotic stress condition. It is also useful for selecting an agent that alters abiotic stress regulated polynucleotide expression in a plant cell, and to identify a homolog or ortholog to an abiotic stress responsive polynucleotide. The nucleic acid molecule and the polypeptide encoded by it are useful in altering the responsiveness of a plant to an abiotic stress, such as cold stress, salt stress, canting the stress, canting the stress are combinations. The present sequence is used in the exemplification of their combinations.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New stress-responsive nucleic acid, useful responsiveness of a plant, e.g. cereal, to stress, salt stress or osmotic stress.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly
                                            The invention relates to Pseudomonas aeruginosa polypeptides and the polynuclectides encoding them. The sequences are useful in diagnosis and therapy of pathological conditions, as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from a bacterial infection, for evaluating a compound, such as a polypeptide, for the ability to bind a P. aeruginosa nucleic acid, as components of
                                                                                                                                                                                                       Novel isolated nucleic acid encoding Pseudomonas aeruginosa polypeptide, useful as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from bacterial infection.
              effective antibacterial targets, as targets for antibacterial drugs, including anti-P. aeruginosa drugs, as templates for recombinant
                                                                                                                                                                       Disclosure; SEQ ID NO
                                                                                                                                                                                                     pathological
                                                                                                                                                                                                                                                                                                                            Rubenfield

The invention relates to 971 novel human cDNA sequences (ADC29919-ADC30889) and the polypeptides they encode (ADC30890-ADC31860). The invention also relates to nucleic acid sequences over 99% identical with the novel human cDNAs. The invention additionally encompasses expression vectors and host cells comprising a nucleic acid of the invention; the recombinant production of a polypeptide of the invention; an antibody against a polypeptide of the invention, a method of detecting polynucleotides or polypeptides of the invention; and methods of identifying a compound which binds to a polypeptide of the invention. CC invention further discloses methods of peventing, treating or CC ameliorating a medical condition; kits comprising polynucleotide probes CC and/or monoclonal antibodies for carrying out the methods of the CC invention; methods for the identification of compounds that modulate the CC invention; methods for the identification of compounds that modulate the CC contig sequences corresponding to the CDNA sequences of the invention CC (ADC31861-ADC32827) and the polypeptides encoded by the contigs (ADC32628 and EDC3394). The nucleic acids and polypeptides of the invention are CC useful in diagnostics, drug screening, forensics, gene mapping, in the CC identification of mutations responsible for genetic disorders or other traits, for assessing biodiversity, and in producing many other types of CC data and products dependent on DNA and amino acid sequences. They are CC also used for treating diseases such as Parkinson's disease, Alzheimer's CC disease and other neurodegenerative diseases, anaemia, platelet CC disorders, wounds, burns, ulcers, osteoporosis, autoimmune diseases or CC primers, and in the recombinant production of a protein. The polypeptides are also useful in generating antibodies, as molecular weight markers, CC and as food supplements. The present sequence represents a specifically CC claimed human polypeptide sequence of the invention. Note: The sequence CC was obtained in electronic format directly from WIPO at CC tro, wibo. int/oub/published not sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Best
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to isolated purified secreted polynucleotides (SpTM) (1), and the polypeptides (SpTM) encoded by sptm. A polypeptide encoded by (I) is used to identify a compound which binds to it. A microarray comprising (I) is used to generate a transcript. (I) is used to screen a compound for effectiveness in altering expression of (I). (I is used to assess toxicity of a test compound. An agonist or antagonist identified by a new method is used in a pharmaceutical composition. The secretory molecules are used to diagnose or treat conditions, diseases o disorders associated with cell signaling e.g. arteriosclerosis, psoriasis, and cancer. Sequences given in ADI40308-ADI40468 represent human purified secretory polynucleotides of the invention, and those given in ADI40469-ADI40461 represent the polypeptides they encode.
